

dataJAR Penetration Testing

At dataJAR, the security of both our systems and our customers' data is of the utmost importance to us and we will do everything in our power to maintain that level of security.

We regularly perform penetration testing, which is undertaken annually using a certified third party cyber security firm. We may on occasion perform more regular or targeted penetration testing to ensure standards are maintained. All penetration testing is remediated internally if any requirements occur.

We are not able to disclose the information from our penetration testing due to the level of confidential detail(s) contained within these tests and in line with our ISO27001 requirements and to comply without our own data protection policies .

For any further information on our organisational policies, please use our Trust Centre on the dataJAR support portal here: <https://support.datajar.co.uk/hc/en-us/categories/4407945393681>
